

SITUATION OF WATER RESOURCES IN BRAZIL: The AGRIBUSINESS IMPACT AND THE STATE OF PAPER

Abstract: The objective of this work is to describe the situation of water resources in Brazil based on the latest reports and documents published by the National Water Agency (ANA) and identify this scenario the impact of the current Brazilian agricultural model, especially with regard to irrigation. Thus, we sought to question the ways adopted by government policies aimed for Agribusiness and indicate contradictions, questioning the extent to which way the water is being used in this sector, either directly or indirectly, has emerged as an accumulation mechanism capital with state support.
